The Ukrainian market of producers of agricultural produce development with an orientation on an export in the countries of European Union must them to inculcate the systems of management of safety of food products in accordance with the requirements of international standards.

European market proposes more hard requirements to the food products, in т. ч. and forage.

In the countries of European Union GMP+ a certification became obligatory, as she is required by the participants of market, in fact one of principles of the system such, that if an enterprise is certificated, then it has a right to work with the same enterprises-contractors. In this time the special attention for the producers of forage, forage additions, premixes and other ingredients presents the international standard of GMP+ (there are system requirements management of safety of forage).

The article describes the international standard GMP+, the definition of the GMP+ feed quality system as the single industry branch scheme for certification of feed industry from the moment of harvesting of grain feed for feed, production and sale of feed products, which are produced according to the principles of HACCP and the quality system of regulated ISO 9001.

This is a big plus for domestic enterprises, as simultaneously introducing such important internationally based systems. This scheme also applies to enterprises involved in storage, transportation and direct production of feed, feed additives, premixes and other components.
